Abstract (en)

[origin: WO2021069476A1] The invention describes a bag transport and bag stacking device (1) for transporting bags (11) or bag stacks and for providing bag stacks for follow-on processing, having a layering separation station (10), for dividing layered bags into subgroups of layered bags (13) each with a predefined number of bags, a stacking station (30) for forming a bag stack from the bags of a subgroup of layered bags, a monitoring station (40) for monitoring bag stacks and/or individual bags in bag stacks, a turning station (30) for optionally turning bag stacks, and a provisioning station (60) for providing bag stacks for follow-on processing. At least one dividing device (80) is provided, with which a sequence of layered bags, subgroups of layered bags and/or bag stack sequences can be divided into at least two sequences of layered bags, subgroups of layered bags and/or series of bag stacks.
