Abstract (en)
[origin: WO2021110669A1] The invention relates to a room module for use when erecting buildings in a modular construction, which room module comprises a floor and side walls, between which a usable region is enclosed, wherein the supporting components of some, and preferably all, of the side walls are composite board panels, wherein the room module comprises a duct region through which cables and lines can be guided through the room module from bottom to top, wherein the duct region is delimited at the bottom by a duct floor, and wherein the duct floor or the duct ceiling comprises a stepped shoulder and projects upwards into the duct region in the region of the shoulder.
