Abstract (en)  
[origin: WO2021069957A1] A heat exchange method and apparatus are described with a heat exchanger comprising an inlet and an outlet of a process fluid, ventilation means for generating a flow of a cooling gas, at least an evaporative body traversed by the flow before the heat exchanger, evaporative liquid supply means to wet the evaporative body, a temperature sensor for measuring the temperature of the process fluid at the outlet of the heat exchanger, control means controlling the flow rate of the evaporative liquid based on the temperature measured by the temperature sensor.
