Abstract (en)

[origin: WO2021070056A1] The invention relates to a logistics container (1) intended to be fitted with at least one protection means, such as a weapon system (6). The container comprises at least one support (5) intended to support the protection means (6), which support (5) is secured to a first face (2a) of at least one movable panel (2) of the container (1). The container is characterised in that the movable panel (2) is able to revolve about a revolving axis (9) between a first position, called stowed position, and a second position, called service position, the movable panel (2) exposing, in its service position, its first face (2a) to the outside, which allows the protection means (6) to be placed so that it is projecting out of the container (1) in a position that is suitable for its operation, the movable panel (2), in its stowed position, exposing its second face (2b) to the outside to give the container (1) the appearance of a conventional logistics container (1), said container comprising a revolving means (20) capable of driving the revolving axis (9) over a half-revolution, to cause the movable panel (2) to transition from its stowed position to its service position.
