Abstract (en)  
[origin: WO2021071588A1] Methods and systems for generating, planning, presenting and/or updating multi-modal transportation routes are provided. In one embodiment, a method is provided that includes determining a route between a starting location of a request for transportation and an ending location of the request. The route may include a rideable modality and a transit modality. Indicators of the first route and at least one additional route may be displayed on a computing device. The first route may then be selected (e.g., via the computing device). Directions may then be provided along the first route using the computing device.
