Abstract (en)  
[origin: WO2021067767A1] Blood glucose control systems and ambulatory medical devices that provide therapy to a subject are disclosed. Disclosed systems and devices can implement one or more features that improve the user experience, such as software update techniques that avoid interrupting delivery of therapy, gesture-based control of therapy delivery, automatic resumption of therapy after a user-initiated pause, improved alarm management, display of autonomously calculated dosing recommendations, wide area network connectivity, and security features.
