Abstract (en)
[origin: WO2021069302A1] A busbar (33) for lamps or electrical units has busbar sections which can be connected to one another and have lines (50), which run in the longitudinal direction, for power supply and/or signal transmission. Electrical connecting contacts (1) are provided in the connecting region of two successive busbar sections, the ends of two lines (50) which are to be connected to one another being connected to each of said electrical connecting contacts and said electrical connecting contacts forming a contact-making area (5) which is accessible from a contact-making side, wherein the electrical connecting contacts (1) have a further contact-making area (9) or a contact on a rear side which is situated opposite the contact-making area (5).
