Abstract (en)
[origin: WO2021069507A1] The invention concerns an electric equipment carrier (100) comprising a frame (107) that defines at least one opening for receiving an equipment mechanism and that is provided with means for fastening to a connection box, the frame being extended at the rear by a basket (120) that defines a recess for receiving the equipment mechanism and that accommodates electrical connection terminals (140). According to the invention, the frame and the basket comprise complementary assembly means designed to be assembled when the basket is inserted through the receiving opening via the front face of the frame and to be disassembled through the receiving opening via the front face of the frame so as to allow the basket to be removed in a forward direction out of the frame.
