Abstract (en)

A clamping device (30) for clamping grinding wheels on a driving spindle (11) of a working tool (10), which comprises:- a rear flange (31) intended to be fitted on the driving spindle (11) in a position proximal to the working tool (10), wherein the rear flange (31) is provided with a front face (312) with which a first damping element (33) is associated;- a front flange (32) intended to be fitted on the driving spindle (11) and provided with a rear face (322), facing the front face (312) of the rear flange (31), with which a second damping element (34) is associated;wherein the front face (312) of the rear flange (31) has a width larger than the rear face (322) of the front flange (32) and the first damping element (33) has a hardness lower than the second damping element (34).
