Abstract (en)  
An air conditioner in the present disclosure is an air conditioner including a refrigeration cycle in which indoor heat exchanger of indoor unit and an outdoor heat exchanger of an outdoor unit, a compressor, and a throttle device are connected via pipes to one another in a closed circuit, the refrigeration cycle using a flammable coolant. The air conditioner includes: blower fan that receives air that has passed through indoor heat exchanger and blows the air to air outlet of the indoor unit; flap that adjusts an orientation of the air blown out from air outlet into a room; and a control device that controls blower fan and flap, wherein the control device closes the flap in an event of stopping the blower fan while the air conditioner keeps running.
