Abstract (en)
[origin: CA3153749A1] The invention relates to an agricultural distribution machine for the combined distribution of seeds and granulate material on agricultural land (100), comprising a separation unit (10) having a rotationally driveable separation element (12) for separating seed grains (S), a portioning unit (14) having a rotationally driveable portioning element (16) for generating granulate material portions (D), and a control unit which is designed to coordinate the rotational movements of the separation element (12) and of the portioning element (16) in order to transfer a predefined depositing ratio of the seed grains (S) and the granulate material portions (D) on the agricultural land (100).
