Abstract (en)
[origin: WO2021074710A1] A support device (1) for crockery comprises a first body (2) having at least one first through opening (4) configured to allow at least the partial insertion of a crockery. The support device (1) further comprises a second body (3) having at least one second opening (6) configured to receive in reversible insertion a portion of the crockery so as to define at least one lower abutment portion for the crockery with respect to the first body (2). Furthermore, the support device (1) comprises vertical separation means (8) interposed between the first body (2) and the second body (3). The first and the second body (2, 3) are connectable so that the at least one first opening (4) and the at least one second opening (6) are facing each other, defining a positioning guide for the crockery.
