Abstract (en)
[origin: WO2021073992A1] The invention relates to a specific multi-layer composite which is suitable for use as a component in liquid crystal devices and which contains, inter alia, two specific polycarbonate layers. The invention also relates to a method for producing the multi-layer composite. The invention further relates to a liquid crystal device comprising a multi-layer composite according to the invention, a method for the production thereof, and the use thereof as building glazing, vehicle glazing, headlight covers, optical filters, shutters, flat-screen displays, glazed advertising devices, partition walls in trains and in point-of-interest devices.
