Abstract (en)
[origin: WO2021073767A1] The present invention relates to a pallet container (10) for storing and transporting liquid or free-flowing filling materials, having a thin-walled, rigid inner plastic container (12) made of thermoplastic, having a tubular lattice frame (14), which tightly encloses the inner plastic container (12) as a supporting jacket and which is made of welded-together horizontal and vertical tubular rods (18, 20), and having a base pallet (16) on which the inner plastic container (12) rests and to which the tubular lattice frame (14) is firmly connected, wherein at least two rod-shaped crossbeams (22) are provided above the inner plastic container (12), the two ends of which are fastened to two opposing lateral walls in the upper region of the tubular lattice frame (14). In order to protect the upper region of the tubular lattice frame (14) against adverse effects of impact stresses and transport vibrations, according to the invention, the crossbeams (22) are designed as resilient spring elements (24).
