Abstract (en)
[origin: EP4047168A1] Window or door profile that is composed of two half-shells (6) in the form of profiles made from a metal such as aluminium or steel which are connected by an insulator (7) in the form of a profile made from a hard thermally insulating material, whereby the half-shells (6) are provided with an undercut groove (8) delimited by at least one deformable lip and whereby the undercut grooves (8) of the half-shells (6) are located opposite each other and with their openings facing each other, whereby the longitudinal edges (12) of the insulator (7) are only clampedly held in line with the undercut grooves (8) of the half-shells (6), characterised in that the insulator (7) substantially has the shape of a slat cut from a flat sheet, the longitudinal edges (12) of which are elastically clamped in the grooves (8) of the half-shells (6) by elastic deformation of the at least one deformable lip without plastic deformation of the material of the half-shells (6) around the grooves (8).
