Abstract (en)  
[origin: EP4047279A1] An air-conditioning apparatus has a detection unit configured to detect an abnormality of a device and a controller configured to, when an abnormality is detected by the detection unit, stop the device and then restart the device. The controller has a time changing unit configured to change, from a reference time that is predetermined, on the basis of a type of an abnormality detected by the detection unit, a restarting time from time when the device is stopped to time when the device is restarted and a restarting unit configured to restart the device when the restarting time set by the time changing unit elapses after the device is stopped.
