Abstract (en)
[origin: WO2021078396A1] A dishwasher (1) is disclosed comprising a washing chamber (3), a rack (5), and a pivot arm arrangement (7) supporting the rack (5) relative to the washing chamber (3). The pivot arm arrangement (7) is movable from a lower position to an upper position so as to elevate the rack (5) from the first extracted position to an elevated position. The dishwasher (1) further comprises an actuator assembly (11) transferrable between a first state in which the actuator assembly (11) is configured to cause the pivot arm arrangement (7) to move from the lower position towards the upper position upon movement of the rack (5) to a first extracted position, and a second state in which the actuator assembly (11) is configured to allow movement of the rack (5) in a horizontal direction (d1) out from the washing chamber (3) past the first extracted position.
