Abstract (en)

[origin: WO2022152429A1] The invention relates to a system composed of an endless screw (18) for a meat grinder and of a blade pin (10) which can be connected to the endless screw, wherein the blade pin (10) has an insertion portion (16) extending in an axial direction for insertion into an endless screw opening (20), and wherein the cross section of the insertion portion (16) has a polygonal basic shape and the endless screw opening (20) is designed to be complementary in such a way that the blade pin (10) can be connected to the endless screw (18) for conjoint rotation by inserting the insertion portion (16) into the endless screw opening (20).
