Abstract (en)

[origin: WO2021078887A1] The invention relates to an electric propulsion system for a vehicle, in particular a motor vehicle, comprising:
• - an electric machine with permanent magnets (4) configured to be supplied by an inverter (90), the electric machine comprising a rotor having six or eight poles, and a stator (410), the stator (410) having a stator body provided with slots (413), the slots receiving conductors forming a winding (411), the number of slots in the stator body being between 48 and 72
• - a differential (7) capable of driving an output shaft, the ends of which are equipped with two laterally opposite wheels of the vehicle,
• - a transmission device (10) kinematically arranged between the electric machine (4) and the differential (7), the transmission device comprising a first torque transmission path (11) having a first reduction ratio and a second torque transmission path (12) having a second reduction ratio, the transmission device (10) comprising a coupling device (1, 2) for transmitting a torque between the electric machine (4) and the differential (7) either via the first transmission path (11) or via the second transmission path (12).
