Abstract (en)

[origin: WO2021079389A1] A device (1) is described for regulating the temperature of beverages in a bottle (2), of the type comprising a bucket (3) in which the bottle (2) can be inserted, means being provided designed to regulate the temperature which comprise cold or hot accumulators (4), wherein the cold or hot accumulators (4) comprise phase-change substances, which are pure substances, having a well-defined melting temperature, for example water, and the phase-change substance is an eutectic alloy, for temperatures below zero degrees centigrade, the phase-change substances being: solution at -5 °C: 1.5% carboxymethyl cellulose, 0.1% sodium bicarbonate, 0.1% sodium chloride, 98.3% water; solution at -11 °C: 20% potassium chloride, 80% water; solution at -16 °C: 19.4% ammonium chloride, 200.25% sodium chloride, 80.35% water; solution at -30 °C: 30% calcium chloride, 70% water.
