Abstract (en)  
[origin: WO2021079277A1] The invention relates to a contacting device (3) for temporarily bringing a first cable portion (5) of a cable (20), in particular a first cable end, into electrical contact with a cable-testing device (10), the contacting device (3) comprising a receptacle (4) for receiving the first cable portion (5) and a first contact element (1) for establishing a first electrical contact with a first cable portion (5) located in the receptacle (4), which first contact element is arranged in the region of the receptacle (4), characterized in that the contacting device (3) has a second contact element (2) for establishing a second electrical contact with a first cable portion (5) located in the receptacle (4), which second contact element is arranged in the region of the receptacle (4), the receptacle (4) being cylindrical and the first contact element (1) and/or the second contact element (2) being electrically connected to a lighting device (9), in particular in the form of a light emitting diode, for indicating the contacting state.
