Abstract (en)

[origin: WO2021078327A1] The invention relates to an industrial electrical connector which is composed of an upper housing portion for holding a conductor and a lower housing portion for holding at least one contact carrier, which lower housing portion can be releasably connected to the upper housing portion. The contact carrier holds at least one contact. The contact is intended to establish a connection to a corresponding mating contact for the transfer of at least electrical energy and/or electrical signals/data. At least one fuse holder for holding at least one electrical fuse is arranged within the industrial electrical connector.
