Abstract (en)

[origin: CN114959969A] In a method for threading (12) at a workstation (2) of a textile machine (1), a plurality of sub-steps are carried out successively at the workstation (2) to carry out a threading process, at least one sub-step being carried out temporally independently of the other sub-steps. The work station (2) has at least one individually driven working means (3) and at least one positioning drive (22) for the at least one working means (3), and the at least one temporally independently performed sub-step comprises an in-situ operation of the at least one positioning drive (22). In a corresponding textile machine (1) having a plurality of work stations (2) of the same type arranged next to one another on at least one longitudinal side of the textile machine (1) and at least one control unit (13), the control unit (13) is designed to operate the textile machine (1) according to the method.
