Abstract (en)

[origin: WO2021081572A1] The invention relates to a shoe in the form of a boot with a shoe lacing system (2), comprising a first lacing section (15) with a continuous first shoelace (17) and multiple first deflecting devices (18, 18-1) and comprising a second lacing section (16) with a continuous second shoelace (19) and multiple second deflecting devices (20, 20-1). In order to adjust the width of the shoe lacing system (2) as required, at least one of the first deflecting devices (18-1) and/or at least one of the second deflecting devices (20-1) defines a respective plurality of mutually spaced first deflecting positions (30) or second deflecting positions (32) arranged one behind the other. At least one of the shoelaces (17, 19) is deflected at at least one of the respective deflecting positions (30, 32).
