Abstract (en)
[origin: WO2021084281A1] A dispenser for a product in stick form comprises a base part (4) and a removable cap (6). The base part (6) comprises an outer tube (14) optionally made from a paper-based or card-based material such as paperboard or cardboard and an inner tube (16) rotatably and slidably received within the outer tube (14) and optionally made from a paper-based or card-based material such as paperboard or cardboard. The inner tube (16) projects upwardly from the outer tube (14) and has an axially extending helical slot (24) formed therein. The base part further comprises a product stick carrier (48) optionally formed of a paper-based or card-based material and supporting a product stick (50). The product stick carrier (48) is rotationally fixed relative to the outer tube (14), is arranged radially inwardly of the inner tube (16) and projects upwardly from the outer tube (14). The base part (6) further comprises a helical element (38) optionally made from a paper-based or card-based material such as paperboard or cardboard. The helical element (38) is rotationally fixed with respect to the outer tube (14) and is received in the helical slot (26) such that rotation of the inner tube (16) relative to the outer tube (14) will move the helical slot (24) along the helical element (38) thereby lowering or raising the inner tube (16) within the outer tube (14) to expose or cover the product stick (50).
