Abstract (en)

[origin: WO2021083874A1] The invention relates to a carrier body (20) for a bristle insert (10), which is formed from two wire portions twisted together, the carrier body (20) comprising a guide opening (28), the cross-section of which is larger than the cross-section of the twisted wire of the bristle insert (10) to be attached to the carrier body (20), and an embedding surface (30), which is accessible in a direction lateral to the longitudinal direction of the guide opening (28), in particular perpendicularly to the longitudinal direction of the guide opening. The invention further relates to a brush, comprising a carrier body (20) of this type and comprising a bristle insert (10), which is fastened in the carrier body (20), the bristle insert (10) comprising two wire portions twisted together, which clamp a plurality of bristles between said wire portions in a bristle portion (12) and form an anchoring portion (14) in a portion free of bristles, which anchoring portion is received in the carrier body (20) and fastened there, characterized in that the anchoring portion (14) includes a bending portion (16; 17), in which the anchoring portion runs in at least one direction deviating from the longitudinal direction. Finally, the invention relates to a method for producing a brush of this type.
