Abstract (en)

[origin: WO2021083618A2] The invention relates to a handheld laser machining apparatus for machining a workpiece. The laser machining apparatus comprises a handheld apparatus comprising an optical device for deflecting laser beams onto the workpiece, a supply unit for controlling the handheld device in an open-loop or closed-loop manner and/or for supplying power/fluid to the handheld device, and a funnel for coupling the handheld device to the workpiece. The invention also relates to a funnel for a corresponding laser machining apparatus.
