Abstract (en)
[origin: WO2021086278A1] The invention is related to a vertical rotation unit (10) developed to be used in the toilet machine with robotic high pressure ring adhesion in the sanitary ware sector. Said vertical rotation unit (10), provides casted semi-finished products flat without formation of any defect by means of making the counter gravity casting possible. Said vertical rotation unit (10) allows for selecting a lower capacity robot by decreasing the total load of the robot and thus it both decreases the costs and extends the lifecycle of the product.
