Abstract (en)
[origin: CA3156738A1] The invention relates to a water sport device, in particular a foilboard, comprising a floating body (4), preferably in the form of a floating board, and a foil device (6) which is secured to the floating body (4) by means of a retaining device (8), wherein the foil device (6) arranged on a link (10) of the retaining device (8) has at least one, preferably at least two foils (16), and can be transferred via the retaining device (8) from an idle and/or starting position close to the floating body (4) into an operating position below the floating body (4), wherein, in the operating position and during a forward movement, due to an uplift force caused by the foil device (6), the floating body (4) can be transferred into a position in which it is spaced apart from the surface of the water, wherein, using a propulsion device provided for the propulsion of the water sport device (2), the motor (100) thereof, which is arranged on the floating body side, is drivingly connected to at least one propulsion element via an angularly and/or longitudinally moveable propulsion train.
