Abstract (en)

[origin: WO2021086195A1] The invention provides a lift system (100) for lifting a heat pump during installation, comprising: a plateau (160) sized for receiving the heat pump; a hoist part (110) arranged for hoisting the plateau; a traveller frame (140) arranged for coupling the plateau to the hoist part for supporting the plateau; a first rail arrangement (150) arranged for providing a slidable coupling between the traveller frame and the hoist part; and a second rail arrangement (170) arranged for providing a slidable coupling between the traveller frame and the plateau; and wherein the first rail arrangement and the second rail arrangement are arranged such that they run independent from each other.
