Abstract (en)

[origin: WO2021083632A1] A composition curable cationically in a moisture-induced manner comprises at least one cationically polymerizable component (A) and at least one moisture-latent initiator for cationic polymerization (B), wherein the polymerizable component (A) comprises an aliphatic epoxide in a proportion of at least 10% by weight, based on the total weight of the composition. Moreover, the moisture-latent initiator (B), under the action of moisture, releases a hydrolysis product having a pKa below 0. Also disclosed are a method of bonding, encapsulating, moulding or coating substrates, and the use of the composition.
