Abstract (en)

[origin: WO2021083976A1] The invention relates to a rotationally symmetrical timber framework tower (1) for wind turbines, comprising a foot portion (19) and a head portion (20), with supports (23, 24) consisting of laminated wooden beams, which extend continuously from the foot portion (19) to the head portion (20) and in each case wind helically in pairs in opposite directions, crossing over one another multiple times at nodes (21), about an axis of rotation (a) of the tower (1).
