Abstract (en)

[origin: WO2021083539A1] The invention relates to a test device (11), comprising a support structure (13) and connecting structures (14, 15) supported by the support structure (13) for forming a detachable mechanical connection with an assembly (12), characterised in that each of the connecting structures (14, 15) has a defined stiffness and is configured to form a force-locking connection with the assembly (12), wherein a sensor (18, 19) is arranged on each of the connecting structures (14, 15) for detecting accelerations and/or forces.
