Abstract (en)

A ski pole (1) is described comprising: a rod (2) having a longitudinal axis (A); a handle grip (3) arranged at a first end (4) of the rod (2); a tip (5) arranged at a second end (6) of the rod axially opposite to the first end; and a basket (7) transverse to the longitudinal axis (A), arranged in a position axially proximal to the tip (5) and comprising a first element (8) fixed integrally to the rod (2) and a second element (10) movable relative to the first element (8) and configured to define, in use, a support surface relative to a snow-covered terrain; the first element (8) has a perimeter edge (11) including a first edge portion (12) and a second edge portion (13) opposite to one another with respect to the tip (5); the second element (10) has a supporting edge (14) and a leading edge (15) opposite to one another with respect to the tip (5); wherein the second element (10) is movable relative to the first element (8) between: a first position, in which the first edge portion (12) is at a first distance (dl) from the supporting edge (14); and a second position, in which the first edge portion (12) is at a second distance (d2) from the supporting edge (14) that is shorter than the first distance (dl).
