Abstract (en)

[origin: WO2021089480A1] The invention relates to an installation device for use in a lift shaft. The installation device (24) comprises: a support (32), extending in a support direction, said support having a first support end (34) and a second support end (42): a support element (36) which is pivotably arranged on the first carrier end (34); and a holding device (46) for holding a movement device (48), by means of which installation material can be moved in the lift shaft. According to the invention, the receiving device (46) is supported on the carrier (32) via an adjustable support device (52) in such a way that an angle ( $\alpha$ ) between a support plane (82), in which a support surface (60) of the receiving device (46) runs, and the support direction (31) of the support (32) is variable.
