Abstract (en)

[origin: CN115040848A] The invention relates to a device for playing basketball, comprising: a base (1) equipped with two lateral structures (5) between which a housing (6) is formed; a strut (2) having a lower section (2b), which can be arranged in a stowed storage configuration placed in the housing (6), and an upper section (2a), which is slidably mounted on the lower section by means of a drive system (22), the drive system comprises a box (23) fastened to the rear wall of the lower section (2b) and a movement mechanism accommodated in the box for moving the upper section (2a), the movement mechanism comprising an actuation socket (24) projecting from the box (23), the actuation socket being provided on the rear wall (23a) of the box (23), the housing (6) is arranged to receive the lower section (2b) in the stowed storage configuration while preventing access to the manipulation socket.
