Abstract (en)
A drive train assembly (280) for a roll crusher (140) for crushing materials having an axially movable crusher roller (190) mounted between first and second roller bearings (250, 260) is described. The drive train assembly (280) comprises a drive train support frame (300) and a drive train carriage (285) comprising a transmission (310) having a drive shaft (320) connectable to a motor (330) and an output shaft (340) comprising an elastic coupling (350) for coupling the output shaft (340) with the axially movable crusher roller (190). The drive train carriage (285) is slidably mounted on the drive train support frame (300) by first and second frame bearings (560, 570, 700, 800) to allow linear lateral sliding movement of the drive train carriage (285) on the drive train support frame (300).
