Abstract (en)

[origin: WO2021094138A1] The invention relates to a mounting frame (24) for displacing and fixing in a shaft (16). A support component (44) for support against a first shaft wall (18) during a displacement in the shaft (16) is disposed on a main frame (30) at least partly movably relative to the main frame (30) in the fixing direction (40). The support component can adopt a fixing position and a displacement position, wherein, in the fixing position, no part of the support face (54) is spaced further outwards in the fixing direction (40), i.e. in the direction of the first shaft wall (18), from the main frame (30) than a fixing face of a primary fixing component (46) that is used to fix the mounting frame (24) in the shaft (16), and, in the displacement position, the support face (54) is spaced further outwards in the fixing direction (40) from the main frame (30) than the fixing face.
