Abstract (en)
[origin: WO2021094509A1] The present invention relates to a moisture-curable polyurethane hotmelt adhesive containing at least 80% by weight based on the total weight of the moisture-curable polyurethane hotmelt adhesive of isocyanate-terminated prepolymer obtainable by mixing diisocyanate (a) with compounds having at least two isocyanate-reactive groups (b) and reacting the mixture to afford the isocyanate-terminated prepolymer, wherein the compounds having at least two isocyanate-reactive groups (b) contain at least one polylactide (b1) obtainable by reaction of lactide with a linear difunctional starter molecule having 2 to 20 carbon atoms and the isocyanate content of the isocyanate-terminated prepolymer is 1% to 5% by weight. The present invention further relates to a process for producing such a moisture-curable polyurethane hotmelt adhesive and to the use thereof for bonding substrates.
