Abstract (en)  
[origin: WO2021094619A1] A lamp trunking system comprising: a plurality of elongate units comprising at least one elongate lamp unit, each of the elongate units comprising an elongate housing and configured for being mechanically and electrically interconnected to one another via at least one of their respective extremities; a plurality of suspension means, each of the suspension means comprising a support fixation means configured for fixing the suspension means to an external support, a retaining means configured for retaining an elongate unit, a connecting means connecting the support fixation means to the retaining means; wherein each of the elongate units comprises along the length of its outer surface at least one sliding surface facing substantially downwardly; wherein the sliding surface is configured for cooperating with at least one supporting sliding element such that the elongate unit temporarily arranged on the supporting sliding element can be slid along its length.
