Abstract (en)

[origin: WO2021050011A1] The invention relates to an oven comprising a rotatable mode setting knob (50) disposed on a control panel (12); multiple electric heating elements (18, 19) provided inside a cooking chamber (11); a commutator (60) operated by activating and deactivating the electric heating elements (18, 19) to heat the cooking chamber (11) in a predefined combination by mechanical switching when the mode setting knob (50) is rotated in a corresponding selected operation mode (A, B, C) and a temperature adjustment element (20) in connection with the electric heating elements (18, 19) to set inner temperature of the cooking chamber (11). The oven further comprising an electronic control unit (30) is configured to check each output terminal (64) of the commutator (60) to detect a return signal (s2) on the a corresponding output terminal (64) while supplying the commutator (60) a constant electric signal (s1) in a predefined modulation from at least one input terminal (62) in a sampling interval in order to detect selected operation mode (A, B, C).
