Abstract (en)

[origin: WO2021094222A1] The invention relates to a computer-implemented method for estimating coverage of the area of traffic scenarios, characterised by the following steps: – providing various traffic scenarios, – classifying and/or clustering the traffic scenarios into known or unknown traffic scenarios, – applying a statistical method to the classified and/or clustered traffic scenarios for estimating predetermined characteristic numbers which describe the coverage of the area of the traffic scenarios, – generating further different traffic scenarios or terminating the method in accordance with the characteristic numbers. The invention further relates to a device for data processing.
