Abstract (en)

[origin: CA3159086A1] An electrical energy production and/or storage device (2), characterized in that it comprises: - an anode (4), - a cathode (6), - a separator (8) allowing the transfer of at least one compound able to trigger and/or allow the production and/or storage of electrical energy, positioned between the anode (4) and the cathode (6), and - at least one breakable, puncturable and/or deformable reservoir (10) of a compound able to trigger and/or allow the production and/or storage of electrical energy, said reservoir (10) having means allowing said compound and said separator (8) to be brought into contact; said means allowing said compound and said separator (8) to be brought into contact notably being means for transferring a liquid.
