Abstract (en)

[origin: WO2021159354A1] In an example method, a user equipment (UE) device determines an offset length of time associated with transmitting or receiving data over a wireless network. The UE device transmits an indication of the offset length of time to the wireless network. The UE device transmits or receives, during a first time interval, a first portion of data to or from the wireless network through a first wireless link. The UE device transmits or receives, during a second time interval, a second portion of data to or from the wireless network through a second wireless link. An end of first time interval is offset from a beginning of the second time interval by the offset length of time.
