Abstract (en)
Provided is a novel fluorine-containing pyrazole compound having a heterocyclic structure at the 1-position, a trifluoromethyl group at the 4-position, and specific substituents at the 3-position and the 5-position, and a method capable of easily producing the fluorine-containing pyrazole compound. The fluorine-containing pyrazole compound is represented by the following general formula (1): wherein in formula (1) above, R represents a hydrocarbon group having 1 to 12 carbon atoms, and a ring Z represents an aromatic heterocyclic ring containing at least one heteroatom selected from the group consisting of a nitrogen atom, an oxygen atom, and a sulfur atom.
