Abstract (en)

[origin: WO2021099193A1] The invention relates to a method for demand-based and mobile destruction of data carriers (14) in collection vehicles (10) using a system, comprising lockable individual containers (16) for throwing in and receiving data carriers (14) with confidential content and a mobile collection vehicle (10) having collection containers (12) for emptying the lockable individual containers (16) in the collection containers (12), wherein the emptied data carriers (14) from the individual containers (16) are destroyed in the collection container (12) according to a destruction method (32), wherein the destruction method (32) has at least one crushing step (36, 36a) and is executed according to a first process sequence and controlled by a control device (46), wherein, in said first process sequence, a destruction of the emptied data carriers (14) occurs according to a first security level (P4), characterised in that the destruction (32) occurs according to a second process sequence as required and controlled by the control device (46), wherein, in said second process sequence, a destruction of the emptied data carriers (14) occurs according to a second security level (P7) that is higher than the first security level.
