Abstract (en)

[origin: WO2021099721A1] The invention relates to the field of foundries and more particularly a foundry mold (1) comprising at least one molding cavity (2) and a pair of supply arms. The molding cavity (2) extends along a horizontal axis (X), from a first end (2a) to a second end (2b), and the first pair of supply arms comprises a first supply arm (3), oriented in a substantially vertical direction and connected to the first end (2a) of the first molding cavity (2), and a second supply arm (4), substantially parallel to the first supply arm (3) and connected to the second end (2b) of the first molding cavity (2). The invention also relates to a method for manufacturing the mold (1) and a foundry method using the mold (1).
