Abstract (en)
[origin: WO2021099341A1] The invention relates to a method for producing an active ingredient sachet (1) with at least one chamber (5, 6, 7, 8, 9, 10), wherein at least one active ingredient preparation (12, 13, 14, 15) can be received in each chamber (5, 6, 7, 8, 9, 10). The method has the following steps: - providing a first material layer (2) made of a first material; - applying at least one active ingredient preparation (12, 13, 14, 15) onto the first material layer (2); - applying a second material layer (3) made of a second material onto the first material layer (2) with the interposition of the at least one active ingredient preparation (12, 13, 14, 15) between the first and second material layer (2, 3); - partly connecting the first material layer (2) and the second material layer (3) together such that an active ingredient sachet (1) with at least one chamber (5, 6, 7, 8, 9, 10) is formed, wherein at least one active ingredient preparation (12, 13, 14, 15) can be received in each chamber (5, 6, 7, 8, 9, 10); and - punching the active ingredient sachet (1) out of the first and second material layer (2, 3). The invention additionally relates to an active ingredient sachet (1) produced in such a method and to the use of such an active ingredient sachet (1).
