Abstract (en)
[origin: WO2021099325A1] The present invention relates to a stopper for closing a container. According to the invention, this stopper comprises: - a cap (10) comprising an upper part (11) and a skirt (12), termed outer skirt (12), extending said upper part (11), said upper part (11) comprising a hole (13), - a reservoir (15) defining an internal volume for receiving a predetermined maximum dose of a product, said reservoir (15) being as one with said cap (10), being surrounded by said outer skirt (12) so as to be at least partially received in said container when the stopper blocks the latter, - the internal volume of said reservoir (15) being in communication only with said hole (13) in order to permit introduction of the product that is to be metered, and - said stopper is configured to close said container in a sealing manner when it is joined thereto.
