Abstract (en)

[origin: CA3151728A1] The present invention relates to a head part (2) for a cartridge (1) provided for interacting with a dispensing device, the head part (2) having a first receiving region (13) for interacting with a first container and a second receiving region (14) for interacting with a second container, the first receiving region (13) being connected to a first channel (15) and the second receiving region (14) being connected to a second channel (16) which is separated from the first channel (15) at least in regions. A control device (22) is arranged in at least one channel (15, 16) for controlling a volume flow of a composition guided through the corresponding channel (15 or 16). The invention also relates to a cartridge (1) for a dispensing device having such a head part (2).
